Additional requirements for Backboard Supports

Purpose of the test programme

The test programme is designed to verify the FIBA requirements and to establish repeatable tests for the qualifying of backboard supports for a FIBA Study Centre certification.

Field of Application of Test Rules

This test programme is valid for all backboard supports for which a FIBA Study Centre certification of approval is requested. The tests are based on the specifications as listed in the latest edition of the Official Basketball Rules of FIBA.

Conditions of the Test

The test should be performed as a type test under standard atmospheric conditions (atmospheric temperature 23°C, relative air humidity 50%, atmospheric pressure 860 to 1060 hpa). All measuring devices must be capable of measuring values with a tolerance of no more than $\pm 2\%$.

Control Test

During the validity of the certification, the FIBA Research & Study Centre reserves the right to request that one sample of the backboard support unit shall be made available for a control test according to the test programme.

Test Samples

The test should be performed on the following:

- 1 full backboard support
